WORK EXPERIENCE

Information Systems Manager

2015 - Present

AG Financial Solutions

I lead the IS department at AG Financial in developing business efficiencies that help save company resources, develop applications to increase revenue and query accurate information for stakeholders. Managing a small team of developers, I assist in helping projects move along in the pipeline as well as develop and manage my own projects (programming in the trenches) alongside my team. Of the many projects I've had the opportunity to lead, two of my proudest include implementing a secure online portal for clients to manage their investments 24/7/365 as well as launching an investment application that brought in over \$5M worth of investments in its first ten months. I continue to work with various vendors in bringing new and exciting technologies and capabilities into AG Financial.

Owner / Developer

2005-Present

417 Solutions, LLC

Consulted with clients from coast to coast in helping them develop an online presence for their business. Primary work includes full-stack development, website maintenance, print & on-screen graphic design work, WordPress installation and template design.

Web Developer

2008 - 2015

Dream Vacations

As the largest Apple Vacations' reseller in North America, Dream Vacations' website presence consisted of the management of several hundred resort pages as well as a backend agent-side management system that directly tied everything together. Being the sole developer, I worked daily on the front-end and back-end side of things and coordinated with vendors to make sure Dream Vacations stayed #1 in the Mexico/Caribbean travel industry.

Web Designer

2005 - 2008

Central Bible College

Managed Central Bible College's visual online presence, as well as created an intranet for students. I had the opportunity to develop custom ASP web applications using SQL and Windows IIS as well as work in SharePoint server & perform file system management.
